

Virtual Display Computing

- Summary: This IPS Partner Virtual Display Computing (Virtualization) solution represents a range of centralized computing models that use a combination of hardware and/or software technology to simulate a localized PC experience for the user

- Solution:

- Centralizes management of users, applications & data
- Ensures non-invasive integration with existing infrastructure
- Ensures users only access authorized applications
- Secure application & data delivery inside & outside of firewall
- Allows consistent user experience regardless of device or location
- Eliminates need to install software packages on end device
- Enables auditing of application usage
- Reduces time to deploy applications; Enables continuity services
- Provides for multiple protocol access & delivery

“Fewer than 5M PC’s were virtualized in 2006,
by 2011, that number will rise to between 480m and 846M.”

Gartner: August 8, 2007
